«THE VALLEY OF HEART'S DELIGHT»

Santa Clara County "The South Gateway to the Bay Cities"
«One of the Three Most Beautiful Valleys ... World»—Bayard Taylor

An aerial view of the county seat of Santa Clara County—San Jose. There are 1305 square miles or 835,200 acres in Santa Clara County.

SANTA CLARA COUNTY AS AN AIR CENTER

A composite view of the United States Navy Dirigible Base and the San Jose Deep Water Port.

SANTA CLARA VALLEY is a valley for homes, health, recreation, and enjoyable living. Every home in the valley has its flower garden and there are several extensive nurseries. the several rose nurseries growing nearly a million and a quarter budded roses of approximately 325 varieties. These are some of the largest rose nurseries on the Pacific Coast, and probably in the world. The Santa Clara County Flower Lovers Club and its many branches, with a membership of more than 1500 in all parts of the county, put on in the halls of the San Jose Chamber of Commerce seven wonderful flower shows every year, and there are also local flower lovers clubs in other valley communities.

Part of San Jose's Business District

President Herbert Hoover's Home atop San Juan Hill on Stanford University Campus near Palo Alto, Santa Clara County.

REPORT

REVISED JANUARY, 1928

Population—70,000.

Prevailing Winds—North in summer, South in winter.

Grades nearly level. Elevations range from 65′ to 125′ above sea level.

Public Lights electric.

Streets—About half of the 230 miles of streets paved, part of remaining improved. Unimproved streets generally in poor condition during wet weather.

WATER FACILITIES

Privately owned. Water supplied by San Jose Water Works from two sources in one service. By gravity from mountain streams on the eastern slope of Santa Cruz mountains, including Los Gatos Creek, supplemented by direct pressure from wells at five pumping stations, with an equalizing reservoir on the gravity line. Two pumping stations are in operation throughout most of the year, and the others as consumption demands require.

MOUNTAIN SUPPLY: This source furnishes about 44% of the water consumed. There are 4 impounding reservoirs, combined capacity 270,000,000 gallons at elevations ranging from 1400′ to 1500′ and 12 to 15 miles S. W. of San Jose on Los Gatos Creek or its tributaries. From the Williams and Howell reservoirs the water flows along the creek beds to Jones Reservoir, a reinforced concrete diversion dam, elevation about 575′, from which a flume of wood, concrete, and wrought iron, leads to the Trisdale Reservoir in Los Gatos, elevation 550′, which is the final distributor for the mountain supply. This system also supplies the towns of Los Gatos, Saratoga and vicinity. A single 27 inch line extends from Trisdale Reservoir to the Seven Mile Reservoir, capacity 5,600,000 gallons, elevation 317′, thence by an 18 inch wrought iron water pipe to the Cambrian Reservoir, located 5½ miles S. W. of City Hall, capacity 17,000,000 gallons, elevation 239′. It is used as a distributing reservoir for the mountain supply and acts as an equalizer for the pumped supply. Two 18″ mains lead to the distributing system.

PUMP SUPPLY: Main pumping station, located on West Santa Clara Street near Delmas Avenue (Volume 1, Sheet 88), furnishes about 26% of the water used, and is operated to some extent throughout the year. Six wells from 500′ to 865′ deep, and 12″ to 20″ in diameter. Four wells are equipped with three Krogh and one Kimball deep well pumps, and to have Indiana air lift equipment operated by an air compressor. Water level 55′ below ground level. The four pumping wells deliver through a single line into a 61,720 gallon concrete suction reservoir. The air lift wells discharge into a 72,750 gallon suction reservoir which is connected to the former by a short length of 16″ pipe, thence by four Byron Jackson 2 stage centrifugal high lift pumps, capacity 1,440,000 gallons each per 24 hours, driven by 75 H. P. motors and discharge into 18″ header. (I.E.P.) in reserve 2—250 k.v.a. generators each driven by 300 H. P. gas engine.

Seventeenth Street Station Plant No. 2 on Nor. Seventh Street near E. Santa Clara (Vol. 1, Sheet 1), operates about 8 months of year. Four 12″ wells 557′ to 1535′ deep. Three Caton and one Kimball deep well pumps fill a 220,000 gallons concrete suction reservoir. Capacity of pumps 6,600,000 gallons each per 24 hours. Water level about 55′ below ground. Thence by 2 Caton 2 stage centrifugal high lift pumps, one of 2,000,740 gallons per 24 hours driven by a 100 H. P. motor and the other of 1,870,000 gallons driven by a 75 H. P. motor and discharge through separate 10″ connections into distributing system.

Buena Vista Plant No. 3 on Buena Vista Ave. (Vol. 2, Sheets 196 & 207), furnishes 16% of water used. Four 16″ wells from 185′ to 510′ deep, 3 Byron Jackson and 1 Kimball deep well pumps, discharge into a 65,000 gallon concrete suction reservoir. Water level about 80′ below ground level, thence by 2 Byron Jackson deep well single stage centrifugal high lift pumps, capacity 3,600,000 gallons per 24 hours each, driven by 100 H. P. motors, and discharge into a 16″ main of the distributing system.

Bascome Ave. Station No. 4 (Vol. 2, Sheet 194) operating during hours of high consumption in four summer months. Two wells 16″ and 20″ in diameter, 250′ and 618′ deep. Krogh pump, capacity 2,100,000 gallons per 24 hours and Byron Jackson capacity 1,730,000 gallons, discharge into a 60,000 gallon concrete suction reservoir. A 3,600,000 gallons per 24 hours high lift pump driven by a 100 H. P. motor discharges into gravity line from the Cambrian Reservoir. Pipe is so arranged that the pump may be used as a booster for the gravity supply.

Cottage Grove Station No. 5 (Vol. 1, Sheet 100), corner Pomona Ave. and Cottage Grove Ave. Plant operated four months in summer during hours of high consumption. Two wells 16″ and 20″ in diameter and 472′ and 748′ deep, two Byron Jackson deep well pumps, capacity 1,580,000 gallons per 24 hours discharge into a 42,000 gallon wood stave suction tank. Two Byron Jackson high lift pumps, one of 2,300,000 gallons per 24 hours, driven by a 100 H. P. motor and the other of 1,000,000 gallons capacity, driven by a 75 H. P. motor, discharge into a 16″ main of the distributing system.

The rate of capacity of the various units of the system is 30,000,000 gallons per 24 hours. The actual available daily supply is about 18,000,000 gallons. Average daily consumption is 5,700,000 gallons.

6″ to 10″ fire mains in business section connected to duplicate 16″ main extending from main pumping plant supply fire hydrants and are used exclusively for fire purposes. 550 single and double hydrants. About 100 miles of 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, and 18 inch cast iron, wrought iron and steel riveted water pipes. The oldest mains in the system were laid about 1870.

Pressure ranges from 50 to 70 lbs., with an average of 60 lbs., and occasionally drops to 40 lbs.

FIRE DEPARTMENT

Two platoon system. 68 fully paid men. Chief, 2 assistant chiefs, hydrant inspector, fire prevention man, 3 vacation men and 60 apparatus men. 9 stations. 3 engine companies. 7 chemical companies.

APPARATUS

3 auto combination hose and pumpers, 1 auto chemical engine, 6 auto combination hose and chemicals, 1 H. & L. truck, 1 squad wagon, 1 chief's auto, 1 auto hose and battery monitor, 1 auto hose wagon, 14,000 feet of 2½″ hose. In reserve—2 steam fire engines.

FIRE ALARM—Gamewell System, 111 boxes.

FIRE LIMITS—Shown on kep may by heavy red and green lines.

District 1—Red Line District. Buildings to be of brick, concrete or stone or these combined with iron.

District 2—Green Line District. Street fronts may be constructed of any non-combustible material, but side and rear walls must be brick, concrete or stone, or these combined with iron.
